

Areas to Work On (Internal CRM & Workflow Optimization)

1. Centralized Content Tracking System(Anyasegen)

Implement a unified CRM or dashboard (such as Notion, Airtable, or ClickUp) to track every content asset from ideation to publishing.

Each content piece must include:

- **Status:** Raw → In Editing → Internal Review → Approval → Posted
- **Assigned Owner**
- **Deadline & Priority Level.**

This system will reduce dependency on multiple WhatsApp groups and bring transparency to the workflow.

2. Clear Task Ownership & Accountability

Every content piece must have **one clearly defined owner**, even if multiple team members contribute.

To streamline execution:

- Assign a **Lead Designer** for creatives
- Assign a **Lead Editor** for video content
- Introduce a **Final Internal Reviewer** role before sending content for approval

This ensures accountability and eliminates duplication or overlap in responsibilities.

3. Internal Review Layer (Pre-Approval Stage & After posted) Internal QA/QC

Before any content is shared externally for approval, a **mandatory internal QA step** must be followed.

This includes:

- Caption accuracy (Hindi and English grammar)
- Alignment with political messaging and context
- Design consistency and brand adherence

This step minimizes revisions and improves approval efficiency.

4. Standardized Naming & File Management

All files must follow a **uniform naming convention**:

Format:

`Date_Event_Platform_Version`

Example: `20Apr_KisanEvent_Instagram_V1`

A structured cloud storage system (Google Drive or equivalent) must be maintained with clearly defined folders:

- Raw Content
- Edited Content
- Final Approved
- Posted

5. Client Approval Process (External Workflow) (GANESH JOSHI)

Since final authority lies with the client, a structured and disciplined approval process must be followed.

- **Akhilesh Ji (Personal Advisor)** will be the **final approval authority** for all content.
- No content—creative, caption, video, or image—should be published without his explicit approval.
- He must be provided with necessary **access and visibility** into final content for decision-making.

Department-Wise Approval Flow

A. Creative Lab (Design & Video Team)

- Responsible for preparing all creatives and video assets.
- Must internally review and finalize designs/videos.
- Post internal QA, the **Creative Lab is responsible for sending final creatives/videos to Akhilesh Ji for approval.**

B. PR & Social Media Team

- Responsible for:
 - Captions (Twitter, Instagram, Facebook)
 - Platform-specific formatting

- Raw image selection and sequencing
- This team must:
 - Ensure captions are accurate and aligned with messaging
 - Share captions and image sets with **Akhilesh Ji for approval**.

6. Timelines, Deadlines & Delay Management (FOR satyam's understanding) to add the section

To ensure efficiency and eliminate delays, strict timelines must be defined and followed:

Content Turnaround Timelines

- **Image Selection & Upload:** Within a fixed timeframe after receiving raw content
- **Video Editing:** Clear turnaround time based on complexity (same day / next day)
- **Caption Drafting:** Within a defined short window (e.g., 30 minutes–1 hour)

Delay Management System

- Every task must have a **pre-defined deadline** in the CRM system
- Any delay must be:
 - **Flagged immediately**
 - **Communicated in advance** to relevant stakeholders
- Introduce a **“Delay & Escalation” marker** in the tracking system to identify bottlenecks

7. Structured Upload & Publishing Discipline

- No content should be uploaded without:
 - Internal QA completion
 - Final approval from Akhilesh Ji
- Teams must follow a **fixed publishing window** wherever applicable to maintain consistency and timeliness.
- Made on above qc qa approval only it'll be finalised.

Faster Turnaround Time (TAT) Framework

- Define internal SLAs:

- Raw to first draft: X hours
- Edits to approval-ready: X hours
- Prioritize **same-day posting for political relevance** content.

6. Content Calendar & Pre-Planning

- Maintain a **weekly content calendar**:
 - Events
 - Awareness posts
 - Reels & narratives
- Keep **buffer creatives ready** for non-event days to ensure consistency.

7. Version Control System

- Avoid confusion by maintaining:
 - V1, V2, Final versions clearly labeled
- Only **one final file** should be pushed to approval groups.

8. Caption & Messaging Bank (pre approval)

- Build an **internal repository of pre-approved phrases and messaging styles**:
 - किसान (farmer-focused messaging)
 - महिला सशक्तिकरण
 - विकास कार्य
- Speeds up caption writing and ensures consistency.

9. Performance Tracking & Feedback Loop

- Maintain a **weekly analytics report**:
 - Engagement rates
 - Best-performing formats (reels vs static)
- Use insights to guide:
 - Design style
 - Caption tone
 - Posting timing

10. Crisis & Urgent Content Protocol

- Create a **fast-track workflow** for urgent posts:

- Direct escalation internally
 - Priority editing & approval-ready within minimal time
- Ensure no delay in time-sensitive political messaging.

11. Internal Communication Discipline

- Reduce clutter by:
 - Using WhatsApp only for **approvals & urgent communication**
 - Using CRM/dashboard for **task tracking & updates**
- Daily **quick sync (10–15 min)** to align priorities.

12. Quality Benchmarking

- Define internal standards for:
 - Thumbnail quality
 - Reel storytelling
 - Graphic consistency
- Periodically review work against top-performing political pages for benchmarking.
